

Admin Panel – Project Requirements

Project Overview

The Admin Panel will be developed as a centralized management system for managing customers, vendors, approvals, administrators, subscriptions, and reports.

The main objective of the Admin Panel is to provide administrators with a simple and structured interface through which they can monitor important platform information and manage the required records.

The Admin Panel will contain the following major sections:

1. Admin Dashboard
2. Customer Management
3. Vendor Management
4. Approval Management
5. Admin Role Management
6. Subscription Management
7. Reports
8. Push Notification

1. Admin Dashboard

The Admin Dashboard will provide an overview of the overall platform activity.

The dashboard will display important information through summary cards so that the administrator can quickly understand the current platform status.

Dashboard Cards

Total Customer

Displays the total number of customers registered on the platform.

Total Vendor

Displays the total number of vendors registered on the platform.

Total Revenue

Displays the total revenue generated through the platform.

The dashboard should present these details in a clean and user-friendly layout so that the administrator can understand the overall platform status at a glance.

2. Customer Management

The Customer Management section will be used to manage and view customer information available on the platform.

Customer Summary

The module will contain a summary card:

- Total Customers

The card will display the overall number of customers registered in the system.

Customer List

A complete list of customers will be displayed in this section.

The administrator should be able to view customer information in a structured table format.

The customer listing will serve as the main screen for reviewing the customers available in the system.

3. Vendor Management

The Vendor Management section will be used to manage and view vendor information available on the platform.

Vendor Summary

The module will contain a summary card:

- Total Vendors

The card will display the overall number of vendors registered in the system.

Vendor List

A complete list of vendors will be displayed in this section.

The administrator should be able to view vendor information in a structured table format.

The vendor listing will serve as the main screen for reviewing the vendors available in the system.

4. Approval Management

The Approval Management section will be used to manage customer and vendor records that are pending approval.

This section will help the administrator identify records that require review.

Approval Summary Cards

The module will contain the following cards:

- Pending Vendor
- Pending Customer

These cards will display the number of vendor and customer records currently pending for approval.

Approval List

The Approval section will contain a list of vendor and customer records requiring approval.

The administrator will be able to review the available records from the approval list and manage the approval process.

The purpose of this module is to provide a centralized place for handling pending vendor and customer registrations.

5. Admin Role Management

The Admin Role Management section will be used to manage administrator accounts within the platform.

The module will support the following admin roles:

- Sub Admin
- Regional Admin

Manage Admin

The Manage Admin section will display the existing administrator accounts.

The administrator will be able to view and manage the available admin records based on their assigned role.

Create Admin

The system will provide a Create Admin option for creating a new administrator account.

While creating an admin, the required admin role can be assigned as:

- Sub Admin
- Regional Admin

This section will help maintain the required administrator accounts and their respective roles.

6. Subscription Management

The Subscription Management section will be used to manage subscription plans and monitor subscription-related information.

The module will provide an overview through summary cards and a subscription listing.

Subscription Summary Cards

The following cards will be displayed:

Total Plan

Displays the total number of subscription plans available.

Total Subscription

Displays the total number of subscriptions in the system.

Active Subscriber

Displays the total number of currently active subscribers.

Total Revenue

Displays the revenue generated through subscriptions.

Subscription List

The Subscription List will display the available subscription records in a structured format.

This section will allow the administrator to view subscription-related information from a centralized list.

Manage Plan

The Manage Plan section will be used to manage the subscription plans available on the platform.

The administrator will be able to work with the available subscription plans from this section.

7. Reports

The Reports section will be used to provide the administrator with required platform-related reports.

The purpose of this section is to present the available information in a structured and understandable format.

Reports will help the administrator review the required platform data from the Admin Panel.

Overall Admin Panel Scope

The Admin Panel will provide a centralized interface for the administrator to manage the major platform areas:

- Customer Management
- Vendor Management
- Customer & Vendor Approvals
- Admin Role Management
- Subscription Management
- Reports

The interface should be designed with a clean, professional, and user-friendly approach so that administrators can easily navigate between different sections and manage the required platform information.

8. Push Notifications

The Push Notifications module will be used by the administrator to create, send, and monitor notifications from the Admin Panel.

The module will provide a centralized interface where the administrator can send notifications to the required users through different communication channels.

Notification Summary Cards

The Push Notifications page will display the following summary cards:

- **Total Sent** – Total number of notifications sent across all available channels.
- **SMS Sent** – Total number of SMS notifications sent.
- **Emails Sent** – Total number of email notifications sent.
- **Most Targeted** – Displays the most frequently selected target audience.

Notification History

The Notification History section will maintain a record of notifications that have been sent or scheduled.

The list will contain:

- Title
- Type
- Target
- Date
- Status
- Actions

The administrator will be able to review previously created notifications from this section.

Create New Notification

The **Create New Notification** option will allow the administrator to create and send a new notification.

While creating a notification, the administrator will be able to provide the required notification details, select the notification type/channel, and select the target audience.

Broadcast Notification

The administrator will be able to send a common message to the selected target audience.

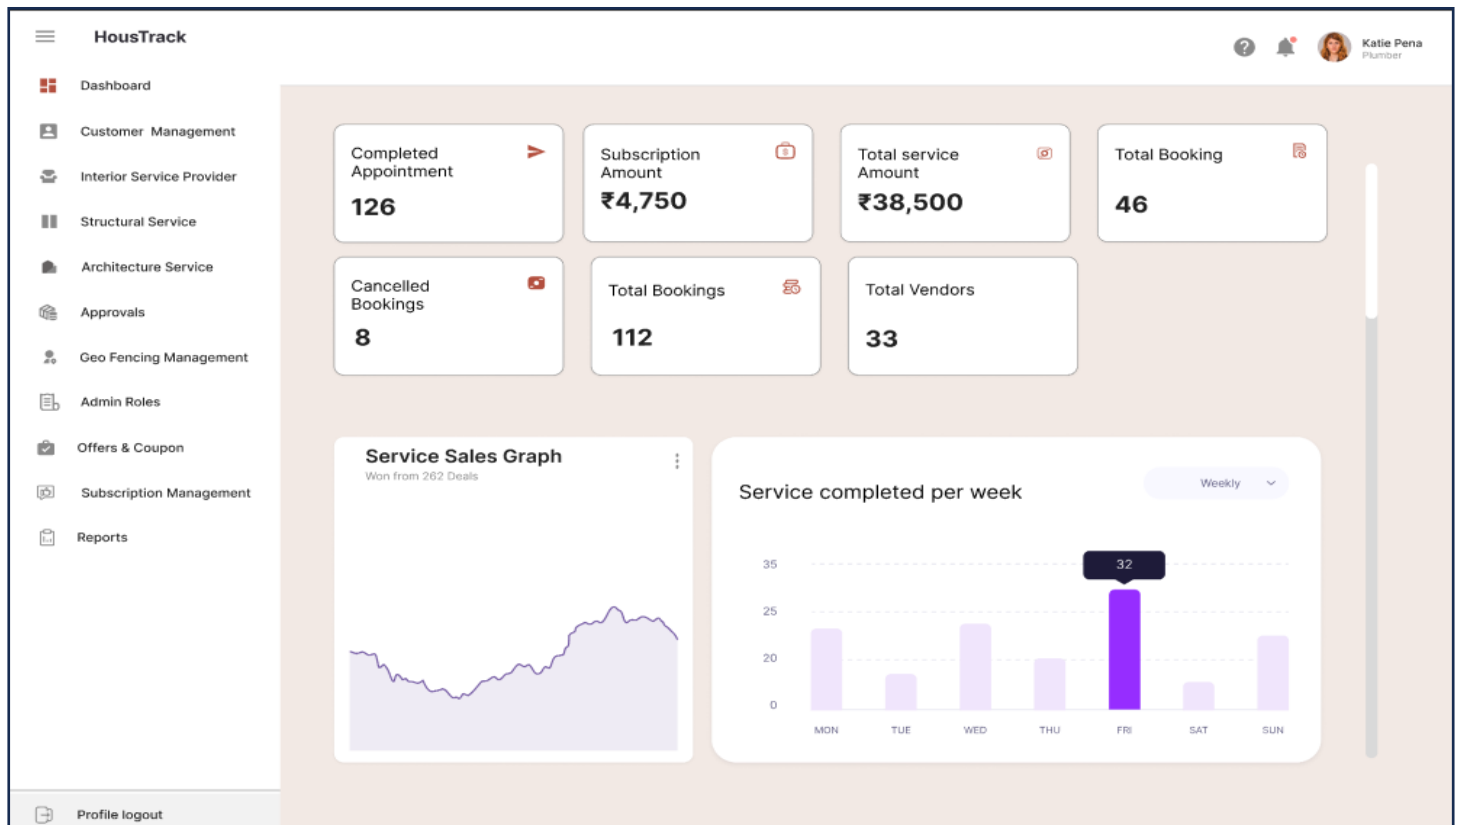

For example, if the target is **All Users**, a single notification created by the administrator will be broadcast to all applicable users.

This will allow the administrator to communicate with multiple users through a single notification action instead of sending the same message individually.

Notification Status

Each notification will have a status that indicates its current state, such as:

- Sent
- Scheduled
- Pending
